

**OssoCrete** is a fast-acting polymer ceramic cement that bonds permanently to concrete, metal rebar, and asphalt. It is a patent-pending formulation utilizing advanced molecular technology, specifically for repair of roadways, bridges, walkways, curbs, culverts and parking lots.

**The New Reality: Indestructible pothole repair that is traffic-ready in as little as 5 minutes.** Imagine the dramatic difference in your daily routine of roadway repair: with ultra-fast cure time, you could fix miles and miles with minimal lane closures. With less traffic disruption, safety is improved – as well as the public’s impatience with orange cones.

**Weather issues are no issue with OssoCrete.** Now imagine being able to (nearly!) ignore the weather, keeping crews active. OssoCrete installs equally well in all weather conditions – wet, dry, hot, cold. No cutting is required, just blow out the loose material and fill.

**Quickly see return on investment (ROI).** OssoCrete substantially reduces cost of pothole repairs if you consider having to repair the same pothole multiple times with cold-patch or asphalt. With zero shrinkage and low permeability, OssoCrete is excellent in freeze-thaw environments.

*“On an 80 degree day, roadway potholes can be repaired and ready for traffic in literally 5 minutes. But quick doesn’t mean weak, quite the opposite. Because OssoCrete permanently bonds to cement and rebar, it becomes stronger than the existing concrete material.”*

--Dan Ossola, Ossola Industrials

**OssoCrete Advantages:**

- Ultra-fast-acting for nearly instant concrete repair
- When cured it is literally stronger than concrete, whether the repair requires feathering in or a deep fill
- Product has no shrinkage and ultra-low permeability making it an excellent choice for freeze-thaw resistance
- Can be applied in any temperature, any weather
- No cutting is required, just blow out loose materials and fill
- Materials are non-combustible and 100% inorganic
- Resistant to high heat, moisture, oil, gas, salt, UV radiation
- Materials have a low carbon footprint compared to concrete
- Our color matching (to existing concrete) capabilities provide a visually appealing repair result
